DETAILED ACTION

Claim Objections

1. Claims 5-14 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims not been further treated on the merits.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3 & 15-16 are rejected under 35 U.S.C. 102(e) as being anticipated by Kanamori (EP 0845716).

Re claims 1-3 & 15-16, Kanamori discloses (Abstract; page 1, lines 40-53; page 6, line 54 - page 7, line 24; Figures 4 & 13-16) an image data processing arrangement in which a matrix of acquired image data is subjected to histogram (frequency distribution) analysis. The result of this analysis is used to detect image background regions when a white peak (i.e. a

frequency count having a sufficiently high occurrence to register as a "peak") is detected.

4. Claims 1, 4, & 15-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Tinkler.

Re claims 1 & 15-16, Tinkler discloses (column 3, lines 47-62; column 7, lines 7-24) an image data processing arrangement in which a matrix of acquired image data is subjected to histogram (frequency distribution) analysis. The result of this analysis is used to detect image background regions using a standard deviation value of the histogram.

Re claim 4, in one case (column 7, lines 19-24) the processing arrangement makes this selection on the basis of a standard deviation which does not exceed a certain threshold value.
